

## Feature Transformation

연습 문제 • 15 min

1. Transformation operations can happen at the instance level or be applied to the entire dataset. Which one is an instance-level transformation?

1 / 1점

- ☒ Feature Cross
- ☐ Bucketizing
- ☐ Standard Scaling
- ☐ Minmax

맞습니다

You've got it right!

2. In a pre-processing training dataset, all transformations that are carried out must be done in the serving set:

1 / 1점

- ☐ False
- ☒ True

맞습니다

Perfect! Also, this is considered a con, as it can produce slower iterations being less efficient than in the training.

3. What statement is true about TensorFlow Transform?
