

Feature Engineering and Preprocessing

연습 문제 • 15 min

총점 3

1. In the mapping of categorical values, can models directly multiply strings by the learned weights?

1 / 1점

☒ No

☐ Yes

맞습니다

Correct! Feature engineering must be applied in advance to convert strings into numerical values.

2. Feature engineering can be applied before modeling or be part of the model on the input stage. Regarding Feature Engineering, we can say that: (Only one correct answer).

1 / 1점

☒ Feature Engineering within the model is limited to batch computations.

☐ TF Transform applies feature engineering separately from the model.

☐ Feature Engineering within the model reduces inference time.

☐ Feature Engineering within the model slows down iterations.

맞습니다

Well done!
