1. You've built a new system for making loan approval decisions. For now, its output is not used in any decision making process, and a human loan officer is solely responsible for deciding what loans to approve. But the system's output is logged for analysis. What is this type of deployment called?

1 / 1점

- ☐ Canary deployment
- ☐ Red green deployment
- ☒ Shadow mode deployment
- ☐ Blue green deployment

맞습니다

That's right! Shadow mode is a type of deployment where the ML algorithm runs in parallel with the user but it's output isn't used for any decision making.

2. On a new social media platform, you're rolling out a new anti-spam system to flag and hide spammy posts. Your team decides to roll out the anti-spam filter via a canary deployment, and roll it out to 1% of users initially. Which of these would you advocate?

0 / 1점

- ☐ After a successful canary deployment, begin to implement a shadow mode deployment.
