8. What are the typical challenges of a **production grade ML system**? (Check all that apply)

1 / 1점

- ☐ Training the model on real world data.

- ☑ Optimizing computational resources and costs.

> ✓ **맞습니다**
>
> Absolutely! You want your ML system to be as frugal as possible.

- ☑ Building integrated ML systems.

> ✓ **맞습니다**
>
> Very well! ML systems perform all operations starting from ingesting the data into the system to deployment.

- ☐ Assessing model performance.

- ☑ Handling continuously changing data.

> ✓ **맞습니다**
>
> Indeed! Data will change over the life cycle of a production system, which can harm its performance.

- ☐ Deploying the model to serve requests.

- ☑ Continually operating while in production.
