That's right! The labelling instructions should remove ambiguity such that every example is labelled consistently.

4. After a system is deployed, monitoring and maintaining the system will help us handle any cases of concept drift or data drift.

0 / 1점

○ True

◉ False

✕ **틀립니다**

Sorry, that's not right. The last step of the machine learning project lifecycle is monitoring and maintenance, which is necessary because your project's use cases and data may change over time. Consider a voice assistant that needs to learn how to recognize new words and phrases because of a new trend.

5. Which statement is a more accurate description of the full cycle of a machine learning project?

1 / 1점

○ It is a linear process, in which we move step-by-step from scoping to deployment. (That's why we call it a cycle. Bicycles are only good at going forward, not backward.)

◉ It is an iterative process, where during a later stage we might go back to an earlier stage. (That's why we call it a cycle--it's a circular process.)
