2. Direct Labeling is one of the methods used in production ML to label data. About it we can say that:

1 / 1점

☑ It captures strong label signals

> ✓ **맞습니다**
> That's correct!

☑ It needs to match prediction results with their corresponding original inference request.

> ✓ **맞습니다**
> That's right! Feature selection identifies features with predictive power.

☐ It can be applied very often in many scenarios

☐ With it, obtained labels don't adapt quickly to world changes

3. A cardiologist labeling MRI images is a typical example of Direct Labeling.

1 / 1점

◉ False

○ True

> ✓ **맞습니다**
> Great job! MRI labeling by a medical specialist is an example of Human Labeling
